

Nirmata Enterprise Subscription for Kyverno

Peace of mind from the team behind Kyverno with support, services and training!

Introduction

As the creator and the primary maintainer of Kyverno, Nirmata has been working with organizations of all sizes to secure and automate their Kubernetes environments. Whether it's on-prem, in the cloud, or at the edge, you can lean on Nirmata for support through every step of your journey. While Nirmata is committed to making the open source Kyverno a full featured and production ready solution for all organizations, business critical applications require more!

The Nirmata Enterprise Subscription for Kyverno (N4K) is designed to address the needs of organizations running production Kubernetes clusters with critical applications.

N4K provides:

- A Nirmata distribution of Kyverno with long term support
- Compatibility testing across Kubernetes and Kyverno releases
- Service Level Agreements (SLAs) for issues
- Curated policy sets for security and best practices

Training and enablement services are available at additional cost.

What's Included

N4K provides a Nirmata maintained Helm chart for Kyverno and includes an interactive on-boarding session with our customer success team, and an optional 1-day Kyverno training course for your teams.

The Nirmata Distribution for Kyverno

Nirmata provides its certified distribution of Kyverno along with curated policies for Pod Security, Best Practice compliance and multi-tenancy. Customers will receive updates for new certified releases along with new curated policy sets.

Learn More

Below is an comparison of N4K and Kyverno OSS:

	N4K	OSS
Release Support	1 year	Best effort (~3 months)
Support Channels	Email, Private Slack, Phone	Public Slack
Support SLAs	24x7 support available	N/A
CVE/Security Fixes	48 hours of disclosure	Typically in a few days
Feature Requests	Prioritized	Community
Kubernetes compatibility	1 year	Community

Customer Success

New N4K customers receive an onboarding package along with access to Kyverno experts who will help customers deploy Kyverno and policies on their first cluster. They will also provide help in customizing the initial set of policies based on customer use cases. Customers will also have 24x7 access to Nirmata Support via email, private Slack channel and phone.

Kyverno Training and Services

Nirmata can provide comprehensive Kyverno training that will cover the following topics:

- Kubernetes Policy Management basics
- Kyverno architecture and policy fundamentals
- Kyverno deployment and lifecycle management
- Policy deployment and reporting
- Kyverno Policy structure and sample policies
- Kyverno monitoring

In addition Nirmata provides a full range of consulting services for policy management across a wide range of use cases like pod and workload security, supply chain security, and best practices.
